

WHAT IS CLAIMED IS:

1. A remote operation system for remotely operating a device to be operated through a communication network from an operation side terminal, comprising:

screen analysis means for analyzing information
5 displayed on a screen of said device to be operated, and
screen information transmission means for
transmitting data of an analysis result obtained by said
screen analysis means to said operation side terminal to
display the data on said operation side terminal.

2. The remote operation system as set forth in claim 1, further comprising

operation execution means for causing said device
to be operated to execute predetermined processing
5 corresponding to user's operation conducted using said
operation side terminal.

3. The remote operation system as set forth in claim 1, further comprising

screen information conversion means for
converting data of an analysis result obtained by said
5 screen analysis means into data suitable for the
transmission to said operation side terminal or for
displaying on a screen of said operation side terminal,
wherein

said screen information transmission means
10 transmits data of a result of conversion by said screen
information conversion means to said operation side
terminal to display the data on said operation side
terminal.

4. The remote operation system as set forth in claim
3, further comprising

conversion rule registration means for
registering and recording rules for converting data of
5 an analysis result obtained by said screen analysis
means into data suitable for the transmission to said
operation side terminal or for displaying on the screen
of said operation side terminal, wherein

said screen information conversion means converts
10 data of an analysis result obtained by said screen
analysis means based on the conversion rules recorded in
said conversion rule registration means.

5. The remote operation system as set forth in claim
3, further comprising

device characteristic detection means for
detecting device characteristics of said operation side
5 terminal, wherein

said screen information conversion means converts
data of an analysis result obtained by said screen
analysis means based on device characteristics detected

by said device characteristic detection means and
10 conversion rules recorded in said conversion rule
registration means.

6. The remote operation system as set forth in claim
1, further comprising

screen change detection means for detecting a
change in display of the screen of said device to be
5 operated, wherein

at a time when a change occurred in display of
the screen is completed, said screen analysis means
analyzes the current screen of said device to be
operated.
10

7. The remote operation system as set forth in claim
1, wherein

said device to be operated is an information
processing device having a GUI, and

5 said screen analysis means detects GUI widgets
displayed on the screen of said device to be operated to
obtain attribute data of said GUI widgets.

8. The remote operation system as set forth in claim
7, wherein

the attribute data of said GUI widgets includes
at least one of a kind of said GUI widgets, a name of
5 said GUI widgets and a location of said GUI widgets in

the screen.

9. The remote operation system as set forth in claim 7, wherein

said conversion rule registration means has registration of rules for converting data of an analysis result obtained by said screen analysis means into a web page that can be displayed by a web browser,

said screen information conversion means converts data of an analysis result obtained by said screen analysis means into a web page based on said rules,

said web page includes, for GUI widgets operable by a user among GUI widgets detected by said screen analysis means, a hyper-link corresponding to the GUI widgets in question, and

when said hyper-link is selected, data for identifying GUI widgets corresponding to the hyper-link in question and data for identifying operation for the GUI widgets in question are transmitted to said operation execution means.

10. The remote operation system as set forth in claim 1, wherein

said conversion rule registration means has registration of rules for converting data of an analysis result obtained by said screen analysis means into a text of electronic mail.

11. The remote operation system as set forth in claim 10, wherein

said operation execution means receives electronic mail including information of user's operation conducted using said operation side terminal, analyzes the received electronic mail to identify the user's operation, and executes the operation in question.

12. The remote operation system as set forth in claim 1, wherein

data of an analysis result obtained by said screen analysis means is data of an XML format.

13. The remote operation system as set forth in claim 1, wherein

said operation side terminal is a portable communication terminal having a character data transmission and reception function.

14. The remote operation system as set forth in claim 1, wherein

said communication network is the Internet.

15. The remote operation system as set forth in claim 1, wherein

said screen analysis means, when moving picture

or still picture is displayed on the screen of said
5 device to be operated, detects the display in question
to extract picture data of the display in question, and

said screen information transmission means
transmits said picture data extracted by said screen
analysis means to said operation side terminal to
10 display the data on said operation side terminal.

16. The remote operation system as set forth in claim
1, wherein

said screen analysis means, when moving picture
or still picture is displayed on the screen of said
5 device to be operated, detects the display in question
to extract picture data of the display in question, and

said screen information conversion means converts
said picture data extracted by said screen analysis
means into data suitable for the transmission to said
10 operation side terminal or for displaying on the screen
of said operation side terminal.

17. The remote operation system as set forth in claim
5, wherein

device characteristics of said operation side
terminal detected by said device characteristic
5 detection means include at least one of an inherent ID
of said operation side terminal, a kind of machine, a
processing rate, a communication rate, communication

costs per unit volume of data, communication costs per
unit time, a data format that can be displayed on a
screen, a playable sound data format, executable program
and script formats, a volume of data receivable at one
time, a color that can be displayed, a character font
that can be displayed, a screen resolution, a physical
length of a screen in a vertical direction and a lateral
direction and the number of characters that can be
displayed within one screen in the vertical direction
and the lateral direction.

18. A remote operation system for remotely operating
a device to be operated through a communication network
from an operation side terminal, wherein

said device to be operated comprises:

screen analysis means for analyzing the contents
displayed on a screen of said device to be operated, and

screen information transmission means for
transmitting data of an analysis result obtained by said
screen analysis means to said operation side terminal to
display the data on said operation side terminal.

19. The remote operation system as set forth in claim
18, further comprising

operation execution means for causing said device
to be operated to execute predetermined processing

corresponding to user's operation conducted using said

operation side terminal.

20. The remote operation system as set forth in claim 18, further comprising

screen information conversion means for
converting data of an analysis result obtained by said
5 screen analysis means into data suitable for the
transmission to said operation side terminal or for
displaying on a screen of said operation side terminal,
wherein

10 said screen information transmission means
transmits data of a result of conversion by said screen
information conversion means to said operation side
terminal to display the data on said operation side
terminal.

21. The remote operation system as set forth in claim 20, further comprising

conversion rule registration means for
registering and recording rules for converting data of
5 an analysis result obtained by said screen analysis
means into data suitable for the transmission to said
operation side terminal or for displaying on the screen
of said operation side terminal, wherein

10 said screen information conversion means converts
data of an analysis result obtained by said screen
analysis means based on the conversion rules recorded in

said conversion rule registration means.

22. The remote operation system as set forth in claim 20, further comprising

device characteristic detection means for detecting device characteristics of said operation side terminal, wherein

said screen information conversion means converts data of an analysis result obtained by said screen analysis means based on device characteristics detected by said device characteristic detection means and conversion rules recorded in said conversion rule registration means.

23. The remote operation system as set forth in claim 18, further comprising

screen change detection means for detecting a change in display of the screen of said device to be operated, wherein

at a time when a change occurred in display of the screen is completed, said screen analysis means analyzes the current screen of said device to be operated.

24. The remote operation system as set forth in claim 18, wherein

said device to be operated is an information

processing device having a GUI, and

5 said screen analysis means detects GUI widgets
displayed on the screen of said device to be operated to
obtain attribute data of said GUI widgets.

25. The remote operation system as set forth in claim
24, wherein

5 the attribute data of said GUI widgets includes
at least one of a kind of said GUI widgets, a name of
said GUI widgets and a location of said GUI widgets in
the screen.

26. The remote operation system as set forth in claim
24, wherein

5 said conversion rule registration means has
registration of rules for converting data of an analysis
result obtained by said screen analysis means into a web
page that can be displayed by a web browser,

 said screen information conversion means converts
data of an analysis result obtained by said screen
analysis means into a web page based on said rules,

10 said web page includes, for GUI widgets operable
by a user among GUI widgets detected by said screen
analysis means, a hyper-link corresponding to the GUI
widgets in question, and

15 when said hyper-link is selected, data for
identifying GUI widgets corresponding to the hyper-link

in question and data for identifying operation for the GUI widgets in question are transmitted to said operation execution means.

27. The remote operation system as set forth in claim 18, wherein

said conversion rule registration means has registration of rules for converting data of an analysis result obtained by said screen analysis means into a text of electronic mail.

28. The remote operation system as set forth in claim 27, wherein

said operation execution means receives electronic mail including information of user's operation conducted using said operation side terminal, analyzes the received electronic mail to identify the user's operation, and executes the operation in question.

29. The remote operation system as set forth in claim 18, wherein

data of an analysis result obtained by said screen analysis means is data of an XML format.

30. The remote operation system as set forth in claim 18, wherein

said operation side terminal is a portable

communication terminal having a character data
transmission and reception function.

31. The remote operation system as set forth in claim
18, wherein

said communication network is the Internet.

32. The remote operation system as set forth in claim
18, wherein

said screen analysis means, when moving picture
or still picture is displayed on the screen of said
device to be operated, detects the display in question
to extract picture data of the display in question, and

said screen information transmission means
transmits said picture data extracted by said screen
analysis means to said operation side terminal to
display the data on said operation side terminal.

33. The remote operation system as set forth in claim
18, wherein

said screen analysis means, when moving picture
or still picture is displayed on the screen of said
device to be operated, detects the display in question
to extract picture data of the display in question, and

said screen information conversion means converts
said picture data extracted by said screen analysis
means into data suitable for the transmission to said

10 operation side terminal or for displaying on the screen
of said operation side terminal.

34. The remote operation system as set forth in claim
22, wherein

device characteristics of said operation side
terminal detected by said device characteristic
5 detection means include at least one of an inherent ID
of said operation side terminal, a kind of machine, a
processing rate, a communication rate, communication
costs per unit volume of data, communication costs per
unit time, a data format that can be displayed on a
10 screen, a playable sound data format, executable program
and script formats, a volume of data receivable at one
time, a color that can be displayed, a character font
that can be displayed, a screen resolution, a physical
length of a screen in a vertical direction and a lateral
15 direction and the number of characters that can be
displayed within one screen in the vertical direction
and the lateral direction.

35. A remote operation method of remotely operating a
device to be operated through a communication network
from an operation side terminal, comprising the steps
of:

5 a screen analysis step of analyzing information
displayed on a screen of said device to be operated, and

screen information transmission step of
transmitting data of an analysis result obtained by said
screen analysis step to said operation side terminal to
display the data on said operation side terminal.

36. The remote operation method as set forth in claim
35, further comprising

an operation execution step of causing said
device to be operated to execute predetermined
processing corresponding to user's operation conducted
using said operation side terminal.

37. The remote operation method as set forth in claim
35, further comprising

a screen information conversion step of
converting data of an analysis result obtained by said
screen analysis step into data suitable for the
transmission to said operation side terminal or for
displaying on a screen of said operation side terminal,
wherein

at said screen information transmission step,
data of a result of conversion by said screen
information conversion step is transmitted to said
operation side terminal to display the data on said
operation side terminal.

38. The remote operation method as set forth in claim

37, further comprising

5 a conversion rule registration step of
registering rules for converting data of an analysis
result obtained by said screen analysis step into data
suitable for the transmission to said operation side
terminal or for displaying on the screen of said
operation side terminal, wherein

10 at said screen information conversion step, data
of an analysis result obtained by said screen analysis
step is converted based on the conversion rules
registered at said conversion rule registration step.

39. The remote operation method as set forth in claim
37, further comprising

5 a device characteristic detection step of
detecting device characteristics of said operation side
terminal, wherein

10 at said screen information conversion step, data
of an analysis result obtained by said screen analysis
step is converted based on device characteristics
detected by said device characteristic detection step
and conversion rules registered at said conversion rule
registration step.

40. The remote operation method as set forth in claim
35, further comprising

a screen change detection step of detecting a

change in display of the screen of said device to be
operated, wherein

at a time when a change occurred in display of
the screen is completed, the contents displayed on the
current screen of said device to be operated are
analyzed by said screen analysis step.

41. The remote operation method as set forth in claim
35, wherein

said device to be operated is an information
processing device having a GUI, and

at said screen analysis step, GUI widgets
displayed on the screen of said device to be operated is
detected to obtain attribute data of said GUI widgets.

42. The remote operation method as set forth in claim
41, wherein

the attribute data of said GUI widgets includes
at least one of a kind of said GUI widgets, a name of
said GUI widgets and a location of said GUI widgets in
the screen.

43. The remote operation method as set forth in claim
41, wherein

at said conversion rule registration step, rules
are registered for converting data of an analysis result
obtained by said screen analysis step into a web page

that can be displayed by a web browser,

at said screen information conversion step, data of an analysis result obtained by said screen analysis step is converted into a web page based on said rules,

10 said web page includes, for GUI widgets operable by a user among GUI widgets detected by said screen analysis step, a hyper-link corresponding to the GUI widgets in question, and

15 at said operation execution step, using data for identifying GUI widgets corresponding to the hyper-link in question and data for identifying operation for the GUI widgets in question which are transmitted when said hyper-link is selected, the operation side terminal is caused to execute predetermined processing.

20 44. The remote operation method as set forth in claim 35, wherein

5 at said conversion rule registration step, rules are registered for converting data of an analysis result obtained by said screen analysis step into a text of electronic mail.

45. The remote operation method as set forth in claim 35, wherein

5 at said screen analysis step, when moving picture or still picture is displayed on the screen of said device to be operated, the display in question is

detected to extract picture data of the display in question, and

at said screen information transmission step, said picture data extracted by said screen analysis step is transmitted to said operation side terminal to display the data on said operation side terminal.

46. The remote operation method as set forth in claim 35, wherein

at said screen analysis step, when moving picture or still picture is displayed on the screen of said device to be operated, the display in question is detected to extract picture data of the display in question, and

at said screen information conversion step, said picture data extracted by said screen analysis step is converted into data suitable for the transmission to said operation side terminal or for displaying on the screen of said operation side terminal.

47. The remote operation method as set forth in claim 39, wherein

device characteristics of said operation side terminal detected by said device characteristic detection step include at least one of an inherent ID of said operation side terminal, a kind of machine, a processing rate, a communication rate, communication

costs per unit volume of data, communication costs per
unit time, a data format that can be displayed on a
10 screen, a playable sound data format, executable program
and script formats, a volume of data receivable at one
time, a color that can be displayed, a character font
that can be displayed, a screen resolution, a physical
length of a screen in a vertical direction and a lateral
15 direction and the number of characters that can be
displayed within one screen in the vertical direction
and the lateral direction.

48. A remote operation program for remotely operating
a device to be operated through a communication network
from an operation side terminal by controlling an
information processing system, which causes execution
5 of:

screen analysis processing of analyzing
information displayed on a screen of said device to be
operated, and

screen information transmission processing of
10 transmitting data of an analysis result obtained by said
screen analysis processing to said operation side
terminal to display the data on said operation side
terminal.

49. The remote operation program as set forth in
claim 48, which causes execution of operation execution

processing of making said device to be operated conduct
predetermined processing corresponding to user's
5 operation conducted using said operation side terminal.

50. The remote operation program as set forth in
claim 48, which causes screen information conversion
processing of converting data of an analysis result
obtained by said screen analysis processing into data
5 suitable for the transmission to said operation side
terminal or for displaying on a screen of said operation
side terminal, and

in said screen information transmission
processing, causes execution of processing of
10 transmitting data of a conversion result obtained by
said screen information conversion processing to said
operation side terminal to display the data on said
operation side terminal.

51. The remote operation program as set forth in
claim 50, which causes execution of conversion rule
registration processing of registering rules for
converting data of an analysis result obtained by said
5 screen analysis processing into data suitable for the
transmission to said operation side terminal or for
displaying on the screen of said operation side terminal,
and

in said screen information conversion processing,

10 causes execution of processing of converting data of an
analysis result obtained by said screen analysis
processing based on the conversion rules registered by
said conversion rule registration processing.

52. The remote operation program as set forth in
claim 50, which causes execution of device
characteristic detection processing of detecting device
characteristics of said operation side terminal, and

5 in said screen information conversion processing,
causes execution of processing of converting data of an
analysis result obtained by said screen analysis
processing based on device characteristics detected by
said device characteristic detection processing and
10 conversion rules registered by said conversion rule
registration processing.

53. The remote operation program as set forth in
claim 48, which causes execution of:

screen change detection processing of detecting a
change in display of the screen of said device to be
5 operated, and

at a time when a change occurred in display of
the screen is completed, processing of analyzing the
contents displayed on the current screen of said device
to be operated by said screen analysis processing.

10

54. The remote operation program as set forth in claim 48, wherein

said device to be operated is an information processing device having a GUI, and

5 in said screen analysis processing, the program causes execution of processing of detecting GUI widgets displayed on the screen of said device to be operated to obtain attribute data of said GUI widgets.

55. The remote operation program as set forth in claim 54, wherein

the attribute data of said GUI widgets includes at least one of a kind of said GUI widgets, a name of said GUI widgets and a location of said GUI widgets in the screen.

56. The remote operation program as set forth in claim 54, wherein

in said conversion rule registration processing, rules are registered for converting data of an analysis result obtained by said screen analysis processing into a web page that can be displayed by a web browser,

5 in said screen information conversion processing, data of an analysis result obtained by said screen analysis processing is converted into a web page based on said rules,

10 said web page includes, for GUI widgets operable

by a user among GUI widgets detected by said screen analysis processing, a hyper-link corresponding to the GUI widgets in question, and

15 in said operation execution processing, in order to cause the operation side terminal to execute said predetermined processing, data for identifying GUI widgets corresponding to the hyper-link in question and data for identifying operation for the GUI widgets in
20 question transmitted when said hyper-link is selected.

57. The remote operation program as set forth in claim 48, which

 in said conversion rule registration processing, causes execution of processing of registering rules for
5 converting data of an analysis result obtained by said screen analysis processing into a text of electronic mail.

58. The remote operation program as set forth in claim 48, which causes execution of:

 in said screen analysis processing, when moving picture or still picture is displayed on the screen of
5 said device to be operated, detecting the display in question to extract picture data of the display in question, and

 in said screen information transmission processing, processing of transmitting said picture data

10 extracted by said screen analysis processing to said
operation side terminal to display the data on said
operation side terminal.

59. The remote operation program as set forth in
claim 48, which

5 in said screen analysis processing, when moving
picture or still picture is displayed on the screen of
said device to be operated, detects the display in
question to extract picture data of the display in
question, and

10 in said screen information conversion processing,
converts said picture data extracted by said screen
analysis processing into data suitable for the
transmission to said operation side terminal or for
displaying on the screen of said operation side terminal.

60. The remote operation program as set forth in
claim 52, wherein

5 device characteristics of said operation side
terminal detected by said device characteristic
detection processing include at least one of an inherent
ID of said operation side terminal, a kind of machine, a
processing rate, a communication rate, communication
costs per unit volume of data, communication costs per
unit time, a data format that can be displayed on a
10 screen, a playable sound data format, executable program

and script formats, a volume of data receivable at one
time, a color that can be displayed, a character font
that can be displayed, a screen resolution, a physical
length of a screen in a vertical direction and a lateral
15 direction and the number of characters that can be
displayed within one screen in the vertical direction
and the lateral direction.
